

Git Intro & Hands-on Practice

How we can better manage projects

October 17, 2019
Honolulu Women in Tech

Outline

- What is **Git**
- Git exercise
 - Setup git repository
 - Shell scriptings
 - Git play time!

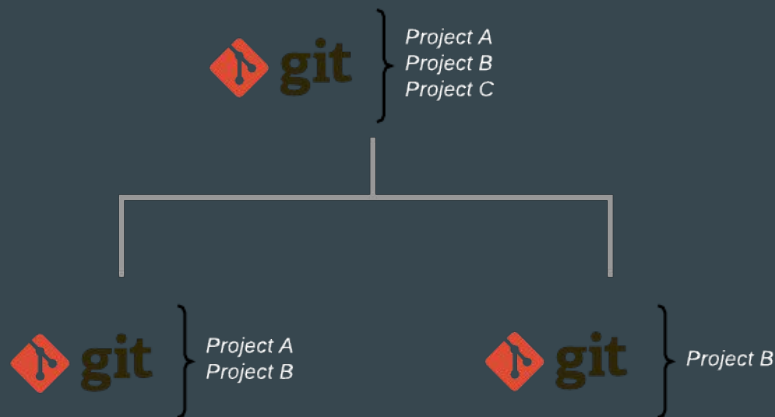

Git

Keeping track of work

- Centralized storage for projects
- Version Control
- Collaborative Workflow

Git as a storage: **Centralized Repository**

- Access your projects from centralized storage and get a local copy
- Update projects in centralized storage
- Distributed Version Control System (DVCS) - developer's work copy is a repository with full history of changes

Git as **Project Version Tracking tool**

- Take a "Snapshot" of your project
- Go back to previous versions
- Leave a note with each version
- Keep track of important version

Git as **Project Version Tracking tool**

- Take a "Snapshot" of your project
- Go back to previous versions
- Leave a note with each version
- Keep track of important version

Git as **Project Version Tracking tool**

- Take a "Snapshot" of your project
- Go back to previous versions
- Leave a note with each version
- Keep track of important version

Inside of Git

- Develop new features without affecting the released version
- Merge back into the main code

Git as Collaboration tool

- Simultaneously and independently work on features

MASTER

Git vs. Github vs. Gitlab

Git

Repository , tool

Github & Gitlab

- Github/Gitlab is a website/ cloud-based service
- Users store and manage code
- Make your repository Private/Public

GitLab

GitHub

Let's git

Shell Scripting

1. Download and Install
2. Open git bash

<https://git-scm.com/downloads>

Few basic script (how to communicate with computer)

>pwd

>ls

>mkdir

>cd

>clear

Where am I ?

```
> pwd
```

Go to my project folder!

```
> ls
```

Create a folder!

```
>mkdir
```

Let's download git project

```
>mkdir
```

Few basic script (how to communicate with computer)

```
>cd ~/
```

```
>cd ..
```

```
>cd sub1
```

```
>cd sub1/sub2/sub3
```

**How to make your project folder i
a GIT Repository?**

Few basic git commands

```
>git init
```

```
>git add
```

```
>git commit
```

```
>git init
```

Create your local project folder into a git repository

```
>git add
```

Put your updated copies to a “stage”

```
>git commit
```

Add to the repository history

How to use Github?

Few basic git commands

>git clone

>git push

>git pull

```
>git push
```

Upload your most updated copy to remote

```
>git clone
```

Copy a project repository from remote site to local

```
>git pull
```

Pull your repository from remote to local

```
>git init
```

Create your local project folder into a git repository

```
>git log
```

```
>git diff
```

```
>git checkout
```
